STANDARD ECMA - 19

for

THE CODING OF CHARACTER SETS  
FOR MICR AND OCR

June 1969

### BRIEF HISTORY

In the last few years ECMA have adopted their 7 bit Coded Character Set (Standard ECMA-6) and three standards for MICR (ECMA-3) and OCR (ECMA-8, ECMA-11). It appeared very clearly that there is a need for a definite shape-to-code assignment. The present Standard ECMA-19 indicates this correspondence.

This Standard has been adopted at the General Assembly of June 12, 1969.

## 1. PURPOSE

- 1.1 This Standard ECMA-19 defines the 7 bit and where appropriate the 4 bit coded representation of the characters comprised in the MICR and OCR sets.
- 1.2 Full specification of these character sets is contained in the Standards:
- |         |   |
|---------|---|
| ECMA-3  | Standard for the CMC7 Printed Image Specification, 2nd Edition          |
| ECMA-8  | Standard for the Nominal Character Dimensions of the Numeric OCR-A Font |
| ECMA-11 | Alphanumeric Character Set OCR-B for Optical Recognition                |
| ECMA-15 | Standard for Printing Specifications for Optical Character Recognition  |
- 1.3 This Standard does not specify how the sets are to be introduced within the environment of the ECMA 7 bit Code. Rules for doing so are the subject of other standards on Code Extension and Expansion.

## 2. SCOPE

This Standard applies to following character sets:

- 2.1 Standard ECMA-3 - CMC7
- 2.1.1 Numeric subset:
- 10 numerals
  - 5 special symbols
- 2.1.2 Alphanumeric set:
- 10 numerals
  - 5 special symbols
  - 26 letters
- 2.2 Standard ECMA-8 - OCR-A
- 10 numerals
  - 3 special symbols
- 2.3 Standard ECMA-11 - OCR-B
- 10 numerals
  - 26 upper case letters
  - 26 lower case letters

- 1 alternative lower case letter
- 27 graphics
- 7 upper case national letters
- 3 lower case national letters
- 7 further graphics
- 4 diacritical signs

3. NOTE

For those characters of the MICR and OCR character sets which are included in the ECMA 7 Bit Coded Character Set (Standard ECMA-6) the same bit combinations have been allocated.

4. TABLES

The correspondence between the character sets and their coded representation is given in the Tables:

Table I	Numeric Subset CMC7 and OCR-A, 4 bit representation
Table II	CMC7 Numeric Subset, 7 bit representation
Table III	OCR-A, 7 bit representation
Table IV	CMC7, 7 bit representation
Table V	OCR-B, 7 bit representation

APPENDIX

OCR-A

In the ISO Recommendation 1073 an alphabet of 26 upper case letters and 18 symbols having the same stylization are added to the OCR-A numeric set.

It is recommended to adopt for the coding of the whole set the scheme of Table 1.
